

ABSTRACT OF THE DISCLOSURE

The tea brewing system comprises a blending system, brewing system, bag squeezing system and cooling system to produce liquid tea for bottling and distribution. The blending system comprises a system for heating and blending water, sweetener and other flavorings in appropriate proportions. The brewing system comprises brewing and filtering mechanisms coupled with the blending system to brew liquid tea concentrate. A bag squeezing system provides apparatus and method for introducing tea bags into a brew tank and for squeezing tea from the bags into water for producing liquid tea concentrate.
